AMPIGEN

Engineering Intelligence | Transforming Business

COMPANY PROFILE

End-to-end digital solutions for business

AMPIGEN combines industry software, custom development and connected engineering to help businesses digitalize their operations. We plan, build, integrate and support software, devices and cloud systems around your users and business requirements.

Industry products

Clinic, restaurant and school software, plus queue management and digital signage.

Engineering services

Custom applications, AI, cloud, embedded systems, integration and digital presence services.

Implementation

Discovery, design, development, testing, deployment, training and ongoing support.

Engineering Intelligence | Transforming Business

AI • Cloud • IoT • Automation • Digital Transformation

Products for your operations

Explore five focused products, with development and implementation services shaped around your requirements.

Clinic Automation

Bring the activities before, during and after a patient visit into a clearer clinic workflow.

Patient registration • Appointments • Consultation records • Billing

Restaurant Solution

Connect the service team, kitchen and checkout around the way your restaurant operates.

Ordering & POS • Kitchen workflows • Billing • Reporting

My School

Bring school teams and their information needs into a more connected digital experience.

School administration • Communication • Digital workflows

Queue Management

Make the next step clearer for visitors and the teams providing in-person service.

Token workflows • Counter allocation • Customer displays

Smart LED

Bring useful visual information to the spaces where customers, visitors and teams need it.

Digital signage • Content presentation • Display integration

Solutions for business needs

Start with the operating need, then bring the relevant products, development and integration services into the plan.

01 Hospitality Digital Operations

Connect restaurant ordering, kitchen workflows and billing with Restaurant Solution. Bring property operations, guest-facing websites and other hospitality requirements into a scoped custom development and integration plan.

02 Healthcare Workflow Digitalization

Bring patient registration, appointments, consultation records and billing into a connected clinic discussion. Scope wider hospital, pharmacy, health-record and specialist information workflows through consulting, development and integration services.

03 School & Parent Digital Experience

Connect school administration and communication with My School. Plan the wider institution website, parent experience and application integrations around the people who create and use school information.

04 Smart Spaces & Service Delivery

Organize visitor flow with Queue Management and communicate through Smart LED displays. Connect property automation, equipment and applications through embedded engineering and integration around the operating environment.

05 Workforce Operations

Define HR and workforce digitalization around your organization's roles, approvals, records and reporting needs. Scope custom applications, configuration and integration to connect the agreed processes with existing business systems.

06 Business Digital Transformation & Integration

Connect applications, devices and data across business functions. Assess existing systems, identify repetitive work and plan the custom software, cloud, IoT or AI-assisted automation needed for the next stage.

07 Digital Presence & Customer Growth

Connect website content, search visibility, campaigns and enquiry follow-up around a clear customer journey. Bring websites, hosting, digital marketing and CRM workflows into a coordinated plan.

Engineering and digital services

Build, connect and support your digital systems with capabilities spanning software, devices, cloud and customer experience.

Website Development & Hosting

Create business websites, product sites and online stores with clear content and useful enquiry paths.

Custom Software & Product Development

Develop web, mobile and desktop applications around your users and workflows.

Embedded Systems & IoT Development

Develop firmware, embedded software, gateway connections and device integrations.

AI, ML & Workflow Automation

Assess document tasks, information retrieval, analysis and repetitive administration.

Cloud Applications & SaaS Development

Design cloud applications, APIs and software platforms around the product and its expected use.

Technology Consulting & System Integration

Assess existing systems, clarify architecture choices and plan modernization.

CRM & Business Automation

Organize customer records, enquiries and follow-up activities around your sales and service processes.

Digital Marketing

Connect website content, search visibility, campaigns and enquiry follow-up around your audience and business goals.

Domain Training & Education

Develop practical skills through training and applied projects in software, embedded systems, IoT, AI and automation.

Implementation, Training & Ongoing Support

Bring requirements, design, development, testing, deployment and handover into a clear delivery plan.

Services can support a new product, a defined development brief, existing-system modernization or an ongoing implementation and support requirement.

Industry and business alignment

Shape the technology around the people, activities and operating conditions in your organization.

INDUSTRY CONTEXT	RELEVANT DIGITAL NEEDS
Healthcare	Connect care delivery and administration around the patient journey. Explore Clinic Automation and define wider healthcare information, queue and integration requirements.
Hospitality	Connect restaurant operations, guest service and digital touchpoints. Evaluate Restaurant Solution and scope the distinct requirements of accommodation businesses.
Education	Bring school administration and parent communication into a connected experience. Explore My School alongside institution websites, integrations and team training.
Embedded Systems	Connect firmware, devices and applications in one engineering plan. Explore Queue Management and Smart LED, or scope custom embedded and IoT development.
Residential & Commercial Properties	Plan connected spaces around occupants, facilities teams and installation conditions. Scope home automation, service queues, displays and device integration.
Manufacturing & Engineering	Bring equipment information and operational workflows into useful applications. Scope embedded engineering, IoT integration, monitoring and business-system connections.
Retail & Commerce	Connect digital discovery with in-store service and follow-up. Explore commerce websites, queue and display products, CRM and custom business applications.
Service Organizations	Connect enquiries, customer requests and internal handoffs. Plan CRM, workflow automation, in-person service and business applications around your delivery process.

Startups & Product Teams

Turn a product idea into a focused release and delivery plan. Bring discovery, user experience, software, cloud and embedded engineering into one engagement.

From discovery to ongoing support

A delivery plan connects the business requirement with design, implementation, rollout and the support needed as your organization evolves.

01 Understand the requirement

Clarify the business challenge, users, essential workflows, existing systems and intended outcome.

02 Design the solution

Define architecture, user experience, delivery scope and acceptance criteria around the agreed priorities.

03 Build and integrate

Develop the application or connected system and implement the required information flows and integrations.

04 Test and deploy

Validate the agreed workflows, prepare deployment, document the solution and support handover to users.

05 Support and improve

Define maintenance, troubleshooting, training and future improvement needs around the way the solution operates.

Prepare a focused project discussion

Share the details that will help us understand your requirement and identify a useful starting scope.

Business challenge

What needs to change, and what would a useful outcome look like?

People and workflows

Who will use the solution, and which activities matter most?

Existing systems

Which applications, data and interfaces need to be considered?

Devices and environment

For connected systems, describe the equipment and operating conditions.

Scope and acceptance

Define launch priorities, constraints and how the result will be reviewed.

Adoption and support

Plan training, handover, support ownership and recurring costs.
